Mattress & Stretcher Pad Covers/Foam Options

Polyfoam

(code P)

Our Polyfoam product is a heavy density foam covered in Black Conductive 'Lectrolite Vinyl. Polyfoam provides enough firm support without bottoming out for healthy children and adults for short periods of time. Not recommended for frail patients. Polyfoam can be 2-6" thick. The 'Lectrolite cover is durable, strong and slip-resistant. Reinforced to be electrically conductive, it prevents the build-up or retention of dangerous electrostatic charges. Water-resistant seams are located on the table edges, out of the area of interest.

Polyfoam Stretch

(code PS)

Our Polyfoam Stretch product is our Polyfoam product but covered in a Black Stretch Vinyl. This special vinyl stretches and recovers to conform precisely to the body. This Stretch Vinyl is hypoallergenic, impenetrable by liquid and body fluids.

Ultra Care

(code UC)

The Ultra Care product is a combination of two separate foams each providing specific functions. The top foam is a pressure reducing foam that conforms to the body like gel. This temperature sensitive material reacts to the patient's body temperature so that it is more rigid in the cooler areas and more forgiving in the warmer areas. The result is a softer, gentler support at the occipital, sacral and ischial areas and firmer support at the cervical and lumbar regions. The Ultra Care product is covered in our premium cover, the Black Stretch Vinyl.
